Background

- This toolkit provides Maryland health care professionals with resources and information on monoclonal antibody treatment for COVID-19.
- Monoclonal antibody treatment (mAb) is not a cure, but it may lessen symptom severity and help keep high-risk patients out of the hospital.

What is Monoclonal Antibody Treatment

- When you are sick, your body makes antibodies on its own to fight the illness.
- Monoclonal antibodies are laboratory-made proteins that mimic natural antibodies' ability to fight viruses, such as COVID-19.

Who Qualifies for Treatment

mAb treatment is for adults and adolescents (12-17 years old) with mild to moderate COVID-19 symptoms who:

- Recently tested positive for COVID-19
- Are within 10 days of first experiencing symptoms
- Do not need to be hospitalized for COVID-19
- Weigh at least 88 pounds

Who Qualifies for Treatment

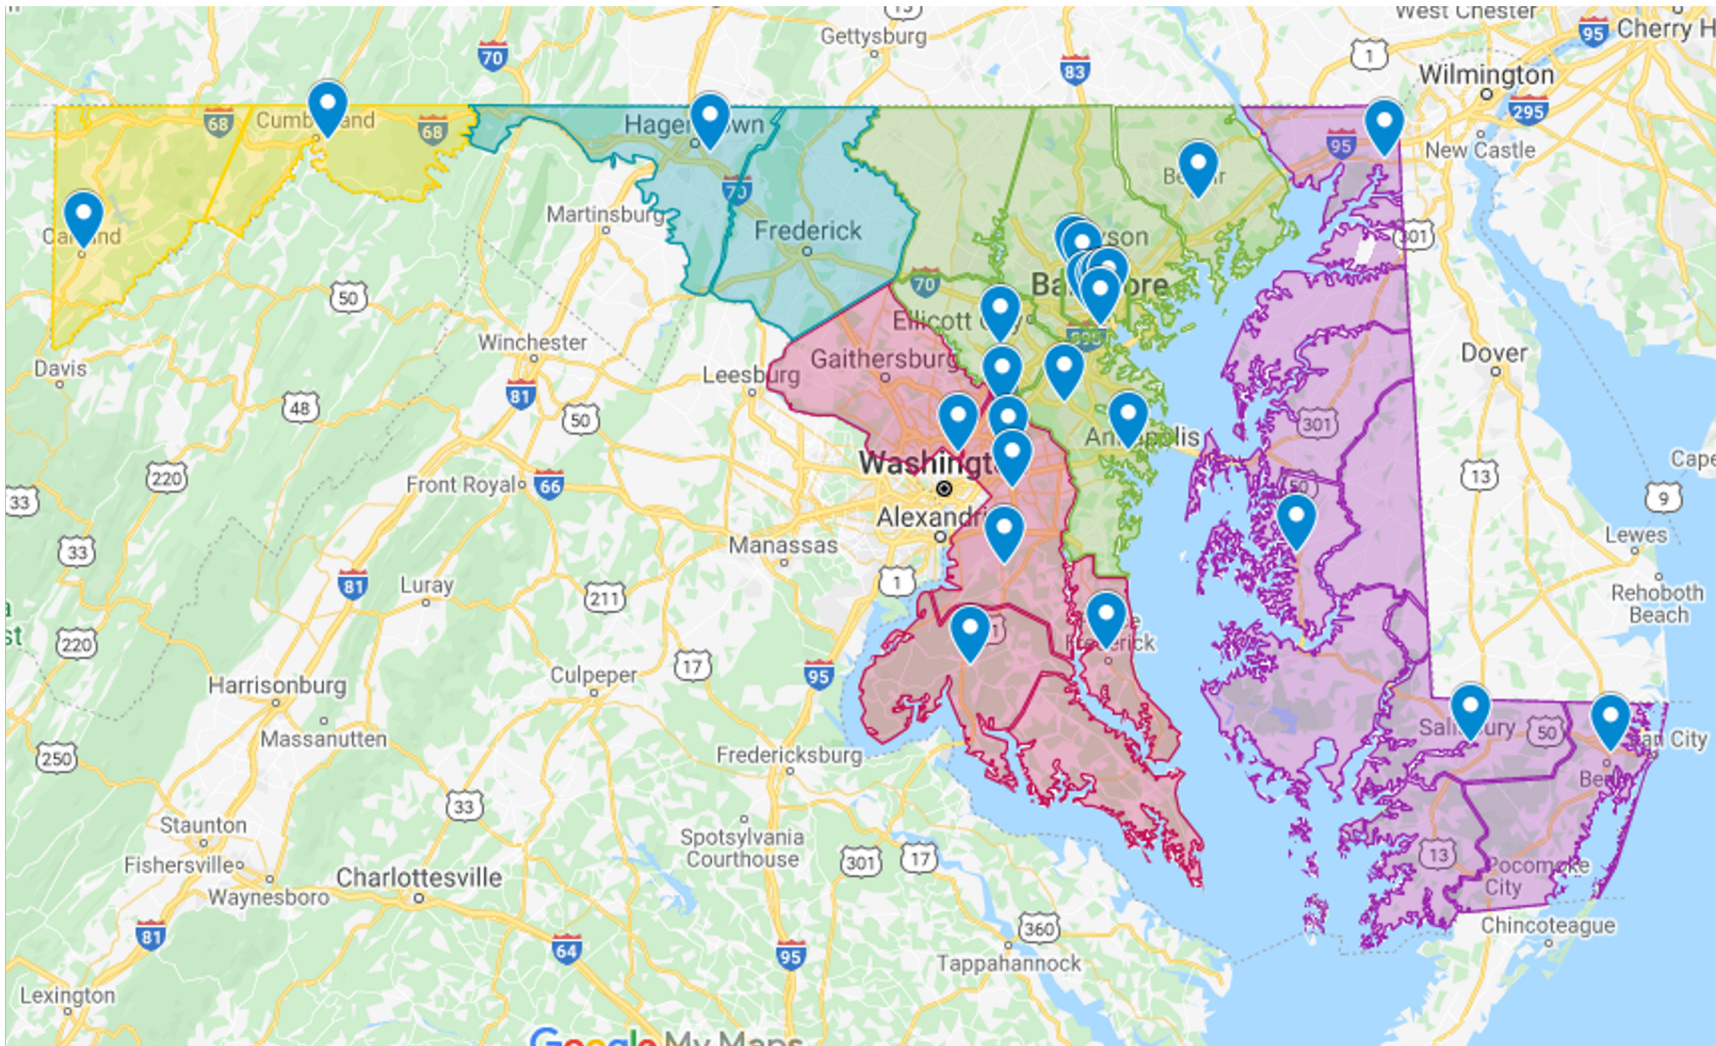

continued

Are in one of the following high-risk categories:

- Are age 65 and older **OR** have chronic kidney disease, BMI of 35 or greater, diabetes, or an immunosuppressive disease
- Are age 55 to 64 **AND** have cardiovascular disease, hypertension, chronic respiratory diseases, or COPD
- For adolescents: high BMI, sickle cell disease, heart disease, neurodevelopmental disorders, a medical-related technological dependence, asthma or other chronic respiratory disease

Referral and Infusion Location Flyer

Health Care Provider referrals to Monoclonal Antibody Infusions

- Monoclonal antibodies (mAbs) directly neutralize the COVID-19 virus and are intended to prevent the progression of disease
- mAbs are likely to be most beneficial if given to patients early in symptom progression
- Product delivered via single IV infusion administration
- Early evidence suggest promise of mAb products in **outpatient** settings to **reduce hospitalization**

Process to refer your patients

1. Review patient eligibility criteria

for patients with mild-moderate symptoms.

Full criteria listed by FDA:

- *Bamlanivimab*
- *Casirivimab and Imdevimab*

2. Perform a COVID-19 PCR or Point-of-Care Rapid Antigen Test

(POC Antigen Tests can be supplied by MDH: complete this [form](#) if interested).

3. Refer your positive patients to a partnering infusion site* ASAP

to start treatment within 10 days of onset of symptoms.

Option 1 (Preferred) OR Option 2

Send eReferral via the CRISP Unified Landing Page
(Starter guide: pp. 1-7, 25-35)

Complete referral form (link at top) and submit directly to infusion site

*(Infusion sites listed on next page)

Referral Options

The screenshot shows the CRISP Unified Landing Page. At the top left is the CRISP logo with a caduceus icon. To its right is the text 'Unified Landing Page'. In the top right corner is a 'User Guide' icon with the text 'SIGN IN' below it. The main section is titled 'Sign In' and contains two input fields: 'Email Address' and 'Password'. Each field has a small icon on the right side. Below the password field is a blue 'Sign In' button. At the bottom left is a link that says 'Forgot Password' with a small icon to its left.

Option 1:

Maryland Referral Form
Ambulatory Monoclonal Antibody Infusion Treatment for COVID-19

Please complete the information on this form if your patient could benefit from monoclonal antibody treatment. This form should be sent to the infusion site with closest proximity to the patient (pg. 3). The Infusion Site will review the referral and contact the patient to coordinate services as soon as possible.

*Please note: **CRISP** is the preferred referral option. Use this form only when CRISP is not available.*

****First Name:** _____ ****Last Name:** _____

****DOB:** _____ **Age:** _____

****Sex:** ☐ M ☐ F ☐ Other _____ ☐ Unknown

****Patient's Preferred Language** ☐ English ☐ Spanish ☐ Other _____

****Address Line 1:** _____

Address Line 2: _____

City: _____ **State:** _____ **County:** _____ ****Zip:** _____

County: _____

****Phone:** ☐ cell ☐ home **Secondary Phone:** ☐ cell ☐ home

Allergies (medication/food/other):
Please include any additional historical patient health information. You may free text, copy/paste, or you may attach a recent clinic note or other documentation, as necessary.

Inclusion and Exclusion Criteria:
****Weight (lbs):** _____ **Kg:** _____ ****Height (feet/inches):** _____ **BMI:** _____

****Patient has had a recent SARS-CoV2 PCR or Rapid Antigen Positive Test Result:** ☐ Yes ☐ No
Note: Test must be first known positive test result.

**** SARS-CoV2 PCR or Rapid Antigen test date (date specimen was obtained):** _____

*The (**) indicates a required field.*

RELEASE: The Maryland Department of Health is encouraging physicians and patients to consider monoclonal antibody treatment, which has been shown to reduce the severity of symptoms and prevent hospitalization in people with mild or moderate symptoms of COVID-19.

A new online referral portal will allow physicians to more efficiently refer COVID-19 patients for monoclonal antibody treatment at several locations throughout Maryland.

"Monoclonal antibody treatments can reduce ... [See More](#)

Monoclonal Antibodies

What are antibodies? Antibodies are naturally made in our bodies to fight infection.

Without Antibodies
A virus enters a cell
Cell lining

With Antibodies
Antibodies block the virus from entering the cell

What are MONOCLONAL ANTIBODIES?

Monoclonal antibodies (mAbs) are antibodies developed in a laboratory to help our bodies fight infection.

Nearly 100 mAbs are FDA approved to treat health conditions including cancers and autoimmune diseases.

mAbs are also being studied for the treatment and prevention of COVID-19.
